MASKING

The easiest way to create geometric patterns on the wall is by painting. Masking is used to create squares, stripes and lines, either vertical, horizontal or diagonally. Use masking tape for the masking to ensure straight lines. Masking can be combined with different decorating techniques. The bottom of walls that get dirty easily can be painted with a darker colour and the top half with a lighter colour. Masking can also be used for creating stripe effects on the floor.

1. Paint the walls with Feelings Interior Paint and leave to dry.
2. Measure, draw and mask the pattern on the wall. Press the tape firmly to the surface.
3. Spread the paint on the masked surface with a small roller or brush.
4. Remove the tape when the paint is still wet because the tape comes off more easily and the border is clean.

DECORATIVE PAINTING WITH A DECORATION ROLLER

With a decoration roller, the design is created quickly, the finish is interesting and individual depending on the painter. The colour of a decorative painted finish becomes vivid and creates a 3-D colour effect. The finish is mostly affected by the colour of the decorative paint and the base colour only peeps through the surface.

1. Paint the walls with Feelings Interior Paint and leave to dry.
2. Thin Feelings Effect Finish with approximately 20% water or make the decorative paint by mixing Tikkurila's acrylate interior paint with Lasera 1:1.
3. Spread the decorative paint thinly with a roller in approximately half meter strips. Decorate the wet decoration paint immediately with a decoration roller. The best outcome is ensured with two painters - one spreads the decorative paint and the other decorates with the decoration roller.
4. Clean the roller from time to time by rolling it against clean packing paper or wiping with a moist rag.

STENCILING

1. Paint the base colour with Feelings Interior Paint and leave to dry.
2. Attach the stencil where you want it using masking tape or adhesive glue.
3. Pour a small amount of paint on a palette. Dip a styrofoam stippler lightly in the paint and press the stippler against a paper or the palette. The stippler should be nearly dry because this helps keep the edges of the stencil painting neat.
4. Stipple with a light wrist movement directly against the stencil. Wash the stencil from time to time to prevent the holes from blocking.

STAINING (WOOD GRAINING)

1. Paint the walls with Feelings Interior Paint and leave to dry.
2. Measure and mask every second square with masking tape.
3. Spread Feelings Effect Finish on the surface with a small roller using paint sparingly.
4. Decorate the masked squares with a wide brush with parallel strokes so that the pattern looks like wood grain.
5. Remove the tapes and leave to dry.
6. Tape the rest of the squares so that each border shows a couple of millimetres of the decorative surface and decorate the remaining squares in the opposite direction with a brush.

PROJECTION

1. Paint the walls with Joker and leave to dry.
2. Project the pattern with an overhead projector or wide screen television projector onto the wall and lightly trace the pattern with a pencil or a light wood colour.
3. Paint the pattern carefully with brushes and a short roller, following the outlines of the pattern.

TAIKA PEARL PAINT SILVER AND STENCILING

1. Prime the wall with Feelings Universal Primer and leave to dry.
2. Roll on Taika Pearl Paint and decorate the length and breadth of the surface with a brush. Do one square at a time. Leave to dry overnight.
3. Plan where you want the decorations and attach the stencil to the wall with masking tape or adhesive glue.
4. Spread Tunto Fine Textured Finish with a steel spatula from the edges of the stencil towards the middle. Remove the stencil.
5. Wash or wipe the stencil with a moist absorbent rag between each stencil.

COLOUR WASH

Colour wash is a simple, easy and quick way to make single coloured walls more interesting. The finish is a translucent watercolour-type surface that can be dramatic or soft depending on the choice of colour.

1. Paint the walls with Feelings Interior Paint and leave to dry. **2.** Mix the decorative colour by adding water to Feelings Effect Finish 1:1 **3.** Spread the paint with a sponge in a washing-like, circular motion. Wipe lightly to spread the colour evenly. Repeat the treatment 2-3 times in order to produce an even and saturated finish. You can use several colours when colour washing. Let the paint dry between treatments.

THE RIGHT COLOURS AND HANDY INSTRUCTIONS

Remember that in decorative painting the colour of the base and the patterns create the colour effect together. Innovate suitable decorative solutions for your home and execute them. Experiment and get inspired!

Tips, ideas...

- Select the new colour in the lighting of the room you are decorating
- Always read the label and product information about the paint before use.
- You can find different decoration tools in paint stores but you can also try to use chamois, plastic bags and different brushes for patterning. Use your imagination and come up with more ideas.
- Always start by protecting floors, fascias and electric covers. You can also use wide masking tape to protect the ceiling. Remember to remove the masking tape when the paint is still moist.
- Always reserve enough paint to finish the job with the same decorating method.
- If you get paint in the wrong place, remove it immediately with a moist sponge or cleaning cloth.
- Remember to wash the tools with Tool Cleaners as soon as the work is finished.
- Do not change the worker in the middle of painting/patterning a wall or the finish may change.
